ASX Release

White Cliff Nickel Limited (“WCN” or the “Company”)

Drill Rig Contract Finalised/Surface Sample Programme Completed

The Directors of White Cliff Nickel Limited are pleased to announce that the Company has signed a contract with Bostech Drilling Pty Ltd for an aircore rig to commence a drill programme of up to 4,000 metres at the White Cliff nickel project.

The drill rig the Company has secured is scheduled to arrive at the project site in February 2008 and is capable of drilling to depths of up to 120 metres. This first drill programme will test several targets within the project area and includes the location on which a massive sulphide gossan was identified.

This programme will better delineate targets to focus upon with a reverse circulation (RC) drill programme to be carried out in mid 2008. This RC drill programme will test the deeper extensions of several priority targets. Discussions are well advanced to secure an RC rig for this programme.

A surface soil/rock programme consisting of five traverses totaling 29 kilometres has recently been completed. A total of 409 soil samples and 33 rock samples have been submitted to Ultra Trace Laboratory for multi element geochemical analyses. Results from these samples will be correlated with the aeromagnetic data to determine additional targets for the Company to investigate and explore.

For further information about WCN and its projects please visit the Company's web site at www.wcnickel.com.au.
