

1 June 2016

ASX Code: WCN

Completion of Tranche 2 Placement

White Cliff Minerals Limited (ASX: WCN) (“**the Company**”) is pleased to advise that it has completed Tranche 2 of its \$2,640,000 placement made to professional and sophisticated investors. (Refer ASX announcement of 27 April 2016).

Following the receipt of \$1,008,733 of Tranche 2 funds the Company has today issued 168,122,235 ordinary fully paid shares (Shares) at an issue price of \$0.006 each. An additional 110,000,000 free attaching options exercisable at \$0.015 on or before 15 December 2016, being one option for every four Shares subscribed for in both Tranche 1 and Tranche 2 of the placement, will be issued after closing of a prospectus for the same which will be lodged with ASIC forthwith.

The Company intends to direct the funds towards further exploration and drilling on its existing exploration portfolio, and for general working capital.

An Appendix 3B together with three (3) Appendix 3Y's in relation to the above are attached.

Section 708A Notice

The Company issues this notice pursuant to Section 708A(5)(e) of the Corporations Act in relation to the 168,122,235 Shares issued.

The Shares were issued without disclosure to investors under Part 6D.2 of the Corporations Act, in reliance on Section 708(8) of the Corporations Act. The Company, as at the date of this notice, has complied with:

- (a) the provisions of Chapter 2M of the Corporations Act as they apply to the Company; and
- (b) Section 674 of the Corporations Act.

As at the date of this notice, there is no excluded information for the purposes of Sections 708A(7) and (8) of the Corporations Act in relation to the Company.

About White Cliff Minerals Limited

White Cliff Minerals Limited is a Western Australian based exploration company with the following main projects:

Aucu Gold Project (89%): The Project contains extensive porphyry related gold and copper mineralisation starting at the surface and extending over several kilometres. Drilling during 2014 has defined a major **gold discovery** with an initial inferred resource of 1.15Mt at 4.2 g/t containing 156,000 ounces of gold. Drilling has also defined a significant **copper deposit** at surface consisting of 10Mt at 0.41% copper containing 40,000 tonnes of copper. Extensive mineralisation occurs around both deposits demonstrating significant expansion potential. The project is located in the Kyrgyz Republic, 350km west-southwest of the capital city of Bishkek and covers 83 square kilometres. The Aucu gold project is located in the western part of the Tien Shan Belt, a highly mineralised zone that extending for over 2500 km, from western Uzbekistan, through Tajikistan, Kyrgyz Republic and southern Kazakhstan to western China.

Merolia Project (100%): The project consists of 771 square kilometres of the Merolia Greenstone belt and contains extensive ultramafic sequences including the Diorite Hill layered ultramafic complex, the Rotorua ultramafic complex, the Coglia ultramafic complex and a 51 kilometre long zone of extrusive ultramafic lava's. The intrusive complexes are prospective for nickel-copper sulphide accumulations possibly with platinum group elements, and the extrusive ultramafic rocks are prospective for nickel sulphide and nickel-cobalt accumulations. The project also contains extensive basalt sequences that are prospective for gold mineralisation including the Ironstone prospect where historical drilling has identified 24m at 8.6g/t gold.

Bremer Range (100%): The project covers over 127 square kilometres in the Lake Johnson Greenstone Belt, which contains the Emily Ann and Maggie Hayes nickel sulphide deposits. These mines have a total resource of approximately 140,000 tonnes of contained nickel. The project area has excellent prospectivity for both komatiite associated nickel sulphides and amphibolite facies high-grade gold mineralisation.

Laverton Gold Project (100%): The project consists of 136 square kilometres of tenement applications in the Laverton Greenstone belt. The core prospects are Kelly Well and Eight Mile Well located 20km southwest of Laverton in the core of the structurally complex Laverton Tectonic zone immediately north of the Granny Smith Gold Mine (3 MOz) and 7 kilometres north of the Wallaby Gold Mine (7 MOz).

JORC Compliance

The Information in this report that relates to exploration results, mineral resources or ore reserves is based on information compiled by Mr Todd Hibberd, who is a member of the Australasian Institute of Mining and Metallurgy. Mr Hibberd is a full time employee of the Company. Mr Hibberd has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code)'. Mr Hibberd consents to the inclusion of this information in the form and context in which it appears in this report.
