Drilling Contractor Secured for Reedy South

White Cliff Minerals Limited (**White Cliff** or the **Company**) is pleased to announce that it has secured the services of Drillwest to undertake the Company's previously announced maiden drilling program at the Reedy South Gold Project (the "Project") near Cue, Western Australia.

The program, which will consist of 2,000+ metres of reverse circulation (**RC**) and diamond drilling targeting continuity of high-grade mineralisation at depth, will be finalised upon receipt of the maiden mineral resource estimate (**MRE**) for the Project. The Company engaged Perth based Auralia Mining Consultants for the MRE, which is expected to be received in the coming weeks.

The drilling program is to commence in the last week of October and should complete by mid-November. Concurrently with the drilling program, the Company's geologists will conduct an initial geological mapping program across E20/969, E 20/971 and E 20/972.

About the Reedy South Gold Project

The Project covers 156km² of the highly prospective Cue goldfields, including 1km of strike along the prolific Reedy Shear Zone (**RSZ**). The Project comprises one granted mining lease (M20/446) covering the historic underground workings of Pegasus and King Cole, and three exploration license applications (E20/969, E20/971 & E20/972). The Project is situated 40km north of Cue, via the Great Northern Highway and is 80km south of Meekatharra.
